
a
Where the protein sits
21.6 µM in a bouton
−30%
−43%
m½ 46.0 µM
m½ 49.8 µM
Elongation rate, fraction of maximum
α-synuclein monomer (µM)
Elongation: monomers join the growing end
α-synuclein fibril, 6CU7 · cryo-EM, 3.5 Å (FSC 0.5)
S, the free monomer
translucent layer: where the next one of the same fibril sits
b
Less than proportional
proportional
33.9–34.5%
22.6–23.0%
Fall in elongation rate (%)
Fall in α-synuclein (%)
c
How much mimic, by repression strength
floor from K065
PD, 30%
PD, 43%
AD, 29.2%
Mimic factor required
ρ, miRNA-driven over intrinsic mRNA decay
